

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 16-R-001

2. Number one of animals used in this study.

3. Species (common name) Opossum of animals used in the study.

4. Explain the procedure producing pain and/or distress.

Animals are immunized to enhance the abundance of follicular dendritic cells (FDC), which are analogous to human FDC, and used to study how the uterus interacts with the fetus to allow a successful pregnancy. In one animal, a local but not systemic, post-injection inflammatory reaction was noted at the injection site.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

The purpose of this study is to compare the cells of the opossum uterus with the corresponding human cells to elucidate the evolutionary basis of pregnancy-specific genetic changes that prevent material rejection of the fetus and favor establishment of the maternal-fetal relationships. The immunization-induced immunological reaction is needed to increase the abundance of the FDC cells and their survival during the isolation procedure. Suppression of this reaction with analgesics and/or anti-inflammatory agents would negate the purpose of the immunization.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 16-R-001
2. Number 856 of animals used in this study.
3. Species (common name) Hamster of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animals are infected with agents affecting public and world health to study the pathogenic mechanisms of disease.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

The purpose of this study is to identify potential vaccine candidates for an infectious agent that can cause clinical disease ranging from a self-limiting febrile illness to severe renal and/or hepatic compromise. Since the clinical course of the disease is immuno-pathologically-based, the use of analgesics and/or anti-inflammatory drugs has the potential to alter the disease pathogenesis and confound interpretation of vaccine efficacy.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

FEB 10 2014

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 16-R-001

2. Number 12 of animals used in this study.

3. Species (common name) Rabbit of animals used in the study.

4. Explain the procedure producing pain and/or distress.

Animals have discrete areas of their skin surface scarified to facilitate virally-induced papilloma (wart) formation, which is a model of human papillomavirus (HPVC) induced cancers.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

The purpose of this study was to develop new and improved vaccines to prevent and treat HPV infections and associated cancers. To induce papillomas (warts), a scarification procedure is used to create minor surface skin abrasion, which may cause more than momentary pain and, therefore, the use of pre- and post-procedure analgesics was required. Laboratory staff failed to administer the analgesics. When the IACUC was made aware of the analgesic omission, the principal investigator voluntarily ceased this activity. Although the animals did not exhibit evidence of pain or distress, these animals were reclassified because of the potential for pain to have occurred.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

E.4

Two dogs assigned to Column E of this report were used in non-clinical laboratory studies to evaluate the safety of test compounds in accordance to Food and Drug Administration requirements under Good Laboratory regulations 21 CFR 58. The animals were used on studies to determine the potential target organs of toxicity and no effect levels of test articles that were administered. These animals exhibited one or more clinical signs on one or more days that included diarrhea, weight loss, and/or decreased activity. The dogs were not given other drugs such as analgesics or sedatives that might cause reversal of histological toxic effects of test article or induce their own inherent toxicities or drug-drug interactions. Animals were, however, provided fluids, nutritional supplements and other palliative care that mitigated these signs.

Yale University 16-R-0001

Explanation for IACUC Approved Exceptions to USDA Regulations

Feeding

Nineteen *Macaca mulatta*, Category C, and two *Macaca mulatta*, Category D, underwent reward-based food, but not fluid, regulation to optimize learning. Animals were given a reduced ration of standard monkey feed during the testing period of up to five days per week, but provided supplemental food and enrichment treats daily. Based on daily assessment, the total amount and variety of food consumed was sufficient to maintain the animals' health and well-being. Animals were returned to full feed when not on study.

Watering

Two *Macaca mulatta*, Category C, and twenty-one *Macacca mulatta*, Category D, underwent reward-based water, but not food, regulation to optimize learning. Fluid intake, sufficient to maintain the animals' health and well-being, based on daily assessments, was accomplished by permitting the animals to earn fluid to satiety each day or an amount similar to the animal's average daily fluid intake during behavioral training and testing periods. Animals were returned to full water when not on study.

Single Housing

Fourteen *Macaca mulatta*, Category D were singly housed while participating in a self-administration drug study. When off-study the animals were returned to social housing.

Approved Deviations from the *Guide for the Care and Use of Laboratory Animals* and/or Exemptions to the Standards of the Animal Welfare Act and Regulations

(Includes Prolonged Restraint, Food and Fluid Restriction, Multiple Major Survival Surgery, Prolonged Housing in Investigator Laboratory, and Non-standard Housing)

NOT A FOIA
REDACTION

1. Protocol [REDACTED] Approved 4/4/11 Expires 1/31/14
Deviation 1: Fluid restriction
Justification 1: Behavioral studies require fluid restriction.
Deviation 2: Single housing of rodents
Justification 2: Reduces the stress to the hamsters
2. Protocol [REDACTED] Approved 6/1/11 Expires 3/31/14
Deviation 1: surgery in a rabbit in a non-dedicated area
Justification 1: there is fixed equipment in the room that is essential for the surgery and not available in the CCM ORs.
Deviation 2: MMSS
Justification 2: related components in a single research objective
Deviation 3: prolonged restraint
Justification 3: animals must be awake and still during the recordings; they are wrapped in a surgical towel held together with an ace bandage.
3. Protocol [REDACTED] Approved 4/30/13 Expires 1/31/16
Deviation: Rabbits housed at 55-60°C
Justification: This temperature is required in order to grow *T. pallidum*

Facility Registration Number 16-R-0029

**Summary of IACUC Approved Exceptions
to the Regulations and Standards**

Due to unavailability of commercial pharmaceutical grade sodium pentobarbital, the IACUC approved a protocol amendment that included the use of non-pharmaceutical grade sodium pentobarbital as the anesthetic agent for terminal study procedures in dogs and guinea pigs. As a result, non-pharmaceutical grade sodium pentobarbital was administered to 81 dogs and 22 guinea pigs undergoing non-survival study procedures.

The IACUC approved a protocol that allowed housing non-human primates individually due to loss of housing partner during the study or to unavailability of compatible partners at the beginning of the study. Four non-human primates were used on a study conducted under that protocol during which they were individually housed for more than 24 consecutive hours following the loss of their housing partner or unavailability of compatible partner during the study.
